

## EXPERIENCE

### DoorDash

Software Engineer *February 2021 - Present*

- Working on Market Intelligence and Dynamics team to provide the highest quality experience to all DoorDash audiences by developing manual and automated tools to manage markets more efficiently, especially in times of crisis
- Executing on technical optimizations, squashing bugs, be on-call, and more

### Honey

Software Engineering Intern *Summer 2020*

- Worked on the TwoTap integration team, which is responsible for programmatically executing purchases on behalf of users and integrating with other products
- Created, tested, and deployed a new webhook system from the ground up that securely receives updated transactions on users' accounts, for internal use

### Doordash

Software Engineering Intern *Summer 2019*

- Directly worked and collaborated with the Logistics team to tackle various technical optimizations, bugs, and consumer-facing features
- Designed and developed multiple machine learning models to predict delivery times and supply-and-demand healthiness to determine various app actions
- Improved user conversion by 0.15%, generating an extra \$10,000+ per day

### Bloomberg L.P.

Software Engineering Intern *Summer 2018*

- Designed, developed, and automated a machine learning pipeline in order to quickly and accurately calculate prices for complex financial instruments
- Worked and collaborated with the Multi-Asset Risk System team in order to properly integrate my contributions into the existing system

### USC Department of Computer Science

Course Producer *Fall 2017, Spring 2018*

- Teaching assistant for CSCI 103: Introduction to Programming
- Mentored students on fundamental programming concepts

## PERSONAL PROJECTS

### Tommy Bot

Co-founder and Lead Developer *September 2016 - January 2019*

- A chatbot on Facebook Messenger that answers hundreds of students questions about USC daily, with 55,000 total queries answered
- Manage, design, and develop all core aspects of the technology: application architecture, information aggregation, natural language processing and more

## LEADERSHIP

### Lavalab (usclavalab.org)

Director of Development *May 2017 - May 2018*

- Assisted development of a comprehensive product building curriculum, with a focus on the developmental aspects for USC's premier product incubator
- Hosted internal and external workshops on product development skills
- Created, maintained, and updated the website and additional software

## EDUCATION

### University of Southern California

M.S and B.S Computer Science,  
Cum Laude (3.51 GPA), Dec 2020

## SKILLS

### Languages

Python, Swift, C++, HTML, CSS,  
Javascript, R, Kotlin

### Frameworks & Tools

React, SQL, MongoDB, Kubernetes,  
Docker, AWS, Git

### Software

Photoshop, Illustrator, InDesign,  
Lightroom, Premiere (Adobe)

## AWARDS

### Kleiner Perkins Engineering Fellow (2019)

Top 2% out of 5,000+ engineering applicants selected to join a KP portfolio startup and receive mentorship from industry leaders

### USC Iovine and Young Innovation Prize (2017)

Received \$10,000 for Tommy Bot for ideation and execution

### USC Dean's List Scholar

(Spring 2017, Fall 2017, Spring 2018, Fall 2018, Fall 2019)

### PennApps XIII Plaid Prize Award (2016)

Innovative Design for Duellr (Hackathon Project)
